

Period Target Face by Sveinn inn kyrrí Grímsson
Radius = 30 cm
Score = 2 points

Division line

Period Target face from 10 pieces of A4

Radius = 12 cm
Score = 4 points

Radius = 3 cm
Score = 8 points

- Step 1 - Print 10 copies on an A4 Printer.
DO NOT Scale to fit the page as this needs to be printed at it's exact size. Most printers will miss about 5mm around the edges, this is OK.
- Step 2 - Place Glue over these intructions right to the division line.
Line up the edge of the paper, ignoring the blank margin if your printer could not print right to the edge.
- Step 3 - Repeat step 2 until all 10 copies are glued together. this should form a perfect circle if you have lined up each piece properly, though you will need to put the last 2 pieces UNDER first. Draw in the lines where the printer missed, and paint in the colours if you wish them to be more acurate.
